Manager Commentary

Higher-risk assets continued to struggle during the third quarter of 2022 as high inflation, central bank policy shifts and evidence of slowing economic growth weighed on investor sentiment. The U.S. Treasury yield curve flattened (with short-term yields moving closer to long-term yields) in August. A strong U.S. labour market and expectations that inflation might have peaked were not enough to improve sentiment about risk.

The U.S. Federal Reserve Board (Fed) continued its pace of interest rates increases. Record inflation levels and soaring energy prices in the U.K. and eurozone, and disappointing economic data in China, contributed to negative sentiment. Uncertainty remained elevated in Europe, where recession

appeared increasingly likely as the region's energy crisis continued to intensify. China's zero-tolerance COVID-19 policy and geopolitical concerns weighed on its outlook, while its central bank lowered its policy rate and increased economic stimulus to bolster growth.

Economic data showed encouraging signs of peaking inflation and continued labour market strength, which could lead to more restrictive monetary policy, in the manager's view. In addition, the Fed gave investors little expectation for a pause in interest rate increases.
